Summary

Full Stack Developer with 5 years of experience building and scaling web applications end-to-end, with a strong focus on backend development and infrastructure. Works primarily with TypeScript and JavaScript. Builds APIs and services with Node.js and NestJS — async job processing with BullMQ and Redis, caching and throttling, authentication, Stripe payments, and data systems using PostgreSQL, MongoDB, Redis, and Pinecone for vector search. Owns deployment and infrastructure end-to-end: Docker, CI/CD, AWS, full observability with Prometheus and Grafana, and load testing with k6. Builds AI-powered features with OpenAI, Anthropic, and Gemini, including document processing and custom image generation pipelines. On the frontend, works with React, Next.js, and React Native, including mobile apps published to the App Store and Google Play.

Experience

Stealth Startup

Full Stack Developer (Backend)

August 2025 - Present [Ukraine](#)

- Developed new features and optimized backend processes on projects using Nest.js.
- Migrated and refactored business logic between services, improved storage structure and code reuse.
- Implemented API caching, request throttling, and full async job processing with BullMQ and Redis.
- Conducted load testing with k6 across multiple server scenarios to find the most efficient configuration.
- Set up monitoring stack (Prometheus, Loki, Node Exporter, Grafana) with dashboards in Docker.
- Implemented WebSocket communication with Redis across all required endpoints and wrote socket documentation.
- Developed two multilingual SEO-optimized landing pages with Next.js.

Incant

Full Stack Developer

April 2024 - August 2025 (1 year 5 months) [Israel](#)

- Built web and mobile platforms end-to-end, including React Native iOS and Android apps published to the App Store and Google Play.
- Designed and implemented backend APIs with Node.js, NestJS, and Hono — data processing, migrations, batch jobs, retries, and data consistency.
- Built AI-powered automation pipelines (RAG, MCP) with OpenAI, Anthropic, Gemini, and Mistral: document analysis, schema extraction, multi-step workflows, image generation, chunking, and deduplication.
- Implemented AI features including file generation (PDF, DOCX), chat systems, image analysis, and web search.
- Integrated authentication (Kinde, Better Auth, social logins) with session management, password recovery, and access control.
- Worked with Supabase, PostgreSQL/Neon, MongoDB, Redis, Firebase, and Google Cloud; managed Turborepo + pnpm monorepos, Docker, and CI/CD, conducted code reviews, and mentored developers.

Digital Invest Advisor LLC

Frontend Developer

August 2022 - April 2024 (1 year 9 months) [Ukraine](#)

- Developed and optimized the frontend architecture in React — components, routing, and state management with Redux Toolkit; ensured website security.
- Built chat, video and audio calls, audio messages, and notifications with WebSocket, WebRTC, and Web Audio.
- Implemented authentication with Firebase Auth and Google login, integrated Google Maps API, and handled file operations over REST APIs.
- Wrote reusable, unit-tested TypeScript/JavaScript code; optimized performance and cross-browser compatibility.

UniCredit Bulbank

Frontend Developer

February 2022 - July 2022 (6 months) [Plovdiv, Bulgaria](#)

- Created simple components and optimization components
- Successful Telegram clone as a fullstack developer
- Developed RestApi foundation and corrected exist requests
- Fixed different bugs as a front-end developer and created general components
- Coded websites using HTML, CSS/SCSS, JS, TS

Education

University of Plovdiv "Paisii Hilendarski"

Higher Education, Software developer · (October 2018 - July 2022)

Одеський Технічний Фаховий Коледж

Bachelor's degree, Computer Engineering · (September 2014 - July 2018)
